Part 1: The Gateway (Authentication & Identity)

- Focus: Entry point for all users.
- Requirement 1 (User Account Management): A split-view interface showing a Login Form (username/password) and a Registration Form.
- Key Visual Elements: Toggle buttons to switch between "Attendee" and "Organizer" roles during sign-up, ensuring the UI captures the specific fields like age and gender.
- ring sign-up, ensuring the UI captures the specific fields like age and gender.

DataBase Implementation

Part 2: The Attendee Experience (Discovery & Participation)

- Focus: How a regular user interacts with events.
- Requirement 2 (Event Search and Filtering): A search bar at the top with date-pickers and text inputs.
- Requirement 3 (Registration & Cancellation): A "Gallery View" or "List View" of cards representing approved events. Each card includes a "Join" or "Withdraw" button.
- Requirement 6 (Resource Oversight - Attendee View): The interface specifically excludes raw time slots, showing only a clean, curated list of "Approved" events.
- Requirement 9 (Notifications): A "New Event" badge or tag visible on specific event cards and a notification bell icon in the header.

Part 3: The Organizer's Studio (Planning & Management)

- Focus: Tools for creators to manage their schedule.
- Requirement 4 (Event Creation & Submission): A "Create Event" modal or form where organizers input titles, descriptions, and capacity.
- Requirement 5 (Maintenance & Cancellation): An "Organizer Dashboard" showing a table of their specific events with "Edit" or "Cancel" actions.
- Requirement 6 (Resource Oversight - Organizer View): A Calendar View highlighting "Available" time slots, allowing the organizer to see exactly where they can book a new event.
- Requirement 9 (Notifications): Status indicators on their dashboard (e.g., "Pending," "Approved," or "Rejected" labels).

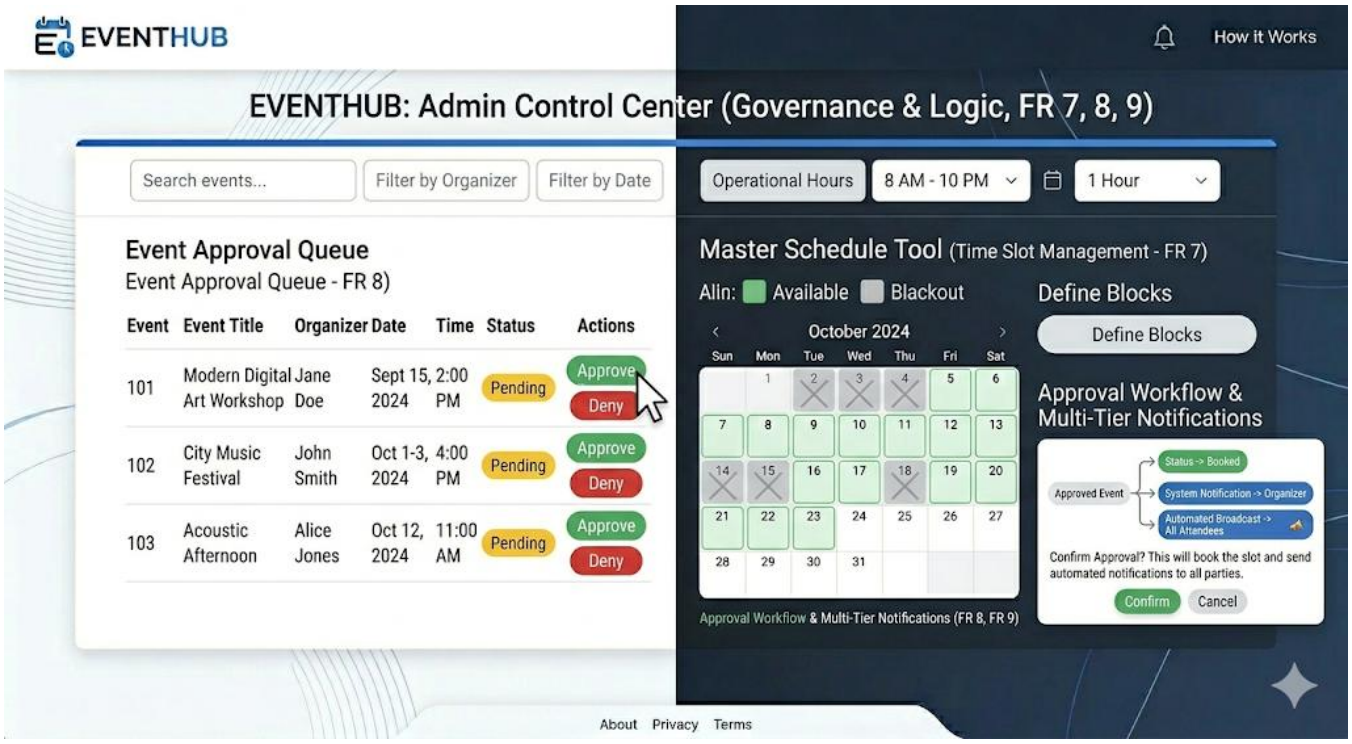
Part 4: The Admin Control Center (Governance & Logic)


- Focus: Backend management and system configuration.
- Requirement 7 (Time Slot Management): A master scheduling tool where the admin sets operational hours and creates the "blocks" (Available vs. Blackout periods).
- Requirement 8 (Event Approval & Booking): An "Approval Queue" showing a list of pending events. Each row features two prominent buttons: Approve (which marks the slot as booked) and Deny (which clears the data).
- Requirement 9 (Multi-Tier Notifications): A visual confirmation showing that upon clicking "Approve," the system triggers the automated broadcast to attendees.
